

Ex.No.4 – Generate the Prompt for Different Prompt Types

Aim

To generate prompts for different prompt types such as Comparative Analysis Prompt, Experiential Perspective Prompt, and Everyday Functioning Prompt using a real-life scenario.

Explanation

Prompt engineering involves designing clear and structured prompts to obtain useful responses from AI systems. Different prompt types are used depending on the purpose. In this experiment, prompts are created based on a smartphone purchase scenario to demonstrate how different prompt styles can guide AI responses.

Procedure

1. Define the Scenario and Use Case

You are planning to buy a new smartphone for daily use. The phone should have long battery life, an AI-powered camera for photography, and smooth performance for everyday tasks such as social media, online classes, and entertainment. However, you are confused between two smartphone models and want to make the best choice. At the same time, you want to understand how such a smartphone would help in your daily life.

2. Identify Prompt Patterns for Each Aspect

Comparative Analysis Prompt

"Compare and contrast two smartphones such as iPhone 14 and Samsung Galaxy S23 in terms of battery life, AI-powered camera features, performance, and price. Analyze which smartphone would be more suitable for a student who needs a device for online classes, social media, photography, and entertainment."

Experiential Perspective Prompt

"From the perspective of a college student who uses a smartphone every day, explain how features like long battery life, AI-powered camera, and smooth performance improve daily activities such as attending online classes, communicating with friends, taking photos, and completing academic work."

Everyday Functioning Prompt

"Describe how smartphone technologies such as AI-powered cameras, battery optimization, and high-performance processors help users in their everyday activities like messaging, video calls, online learning, watching videos, and social media usage."

Result

Prompts for three different prompt types—Comparative Analysis, Experiential Perspective, and Everyday Functioning—were successfully generated using the smartphone purchase scenario.

Conclusion

This experiment demonstrates how different prompt structures help guide AI to produce specific types of responses. Using well-designed prompts improves clarity, relevance, and effectiveness of

AI-generated outputs.
